

Colorado WaterJet Company

in collaboration with **Rafe Ropek**

nationally known sculptor and artist-blacksmith, is very excited to announce a line of beautifully executed panels that set a new standard in decorative metal work.

Made from the material of your choice, in either the standard sizes or sized for your specific need, these panels will add a truly custom look to your fabrication jobs.

Rafe Ropek ©2001

The beauty of these panels is that one design can be varied in numerous ways to create unique rhythmic patterns.

single panel side by side with no turning side by side flipped flipped oppositely flipped and rotated 180°

The WaterJet method allows intricate design possibilities never before possible to fabricators. Since the WaterJet can cut any material of thicknesses to 3", there is a new dimension in quality fabrication. Panels may be ordered for fences, gates, grills, grates, balconies, windows, fireplaces, or any application you might imagine. Steel, aluminum, bronze, and even stone or plastic are some of the materials available. When it comes to accuracy and flexibility, nothing compares to WaterJets' ability to not distort material in any way. Intricate patterns can be cut into the thinnest or thickest material with no fear of distortion. Because this is a cold cutting process there is no warping, no hardening of the edge, no slag to clean.

Colorado WaterJet Company is the leader in the west for customer service and quality. Led by its founder, Dan Nibbelink, PE, dedication to detail is our company's first priority. Whatever your cutting needs require, we are always happy to give you a quote on costs.

Now, with the addition of Rafe Ropek's design concepts, you can expand your business's ability to offer specialty art work to the discriminating client. There are many varieties of Rafe's panels to choose from, but if you need some specific design request, we will be happy to create one of a kind panels just for your job. We can also offer you the service of bending each panel to a specific radius.

Panels may also be shaped other than a rectangle

Panels come in a standard size of 28" x 36" by 1/2" thick. Any other size requirement can be accommodated, as well as material thickness. Find out today, by visiting our web site for a full range of available samples, how Colorado WaterJet Company can help you differentiate your business.
